

Chemistry Lab

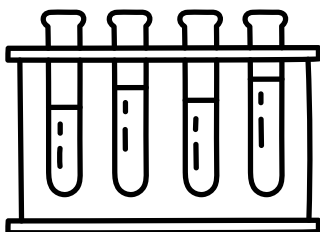

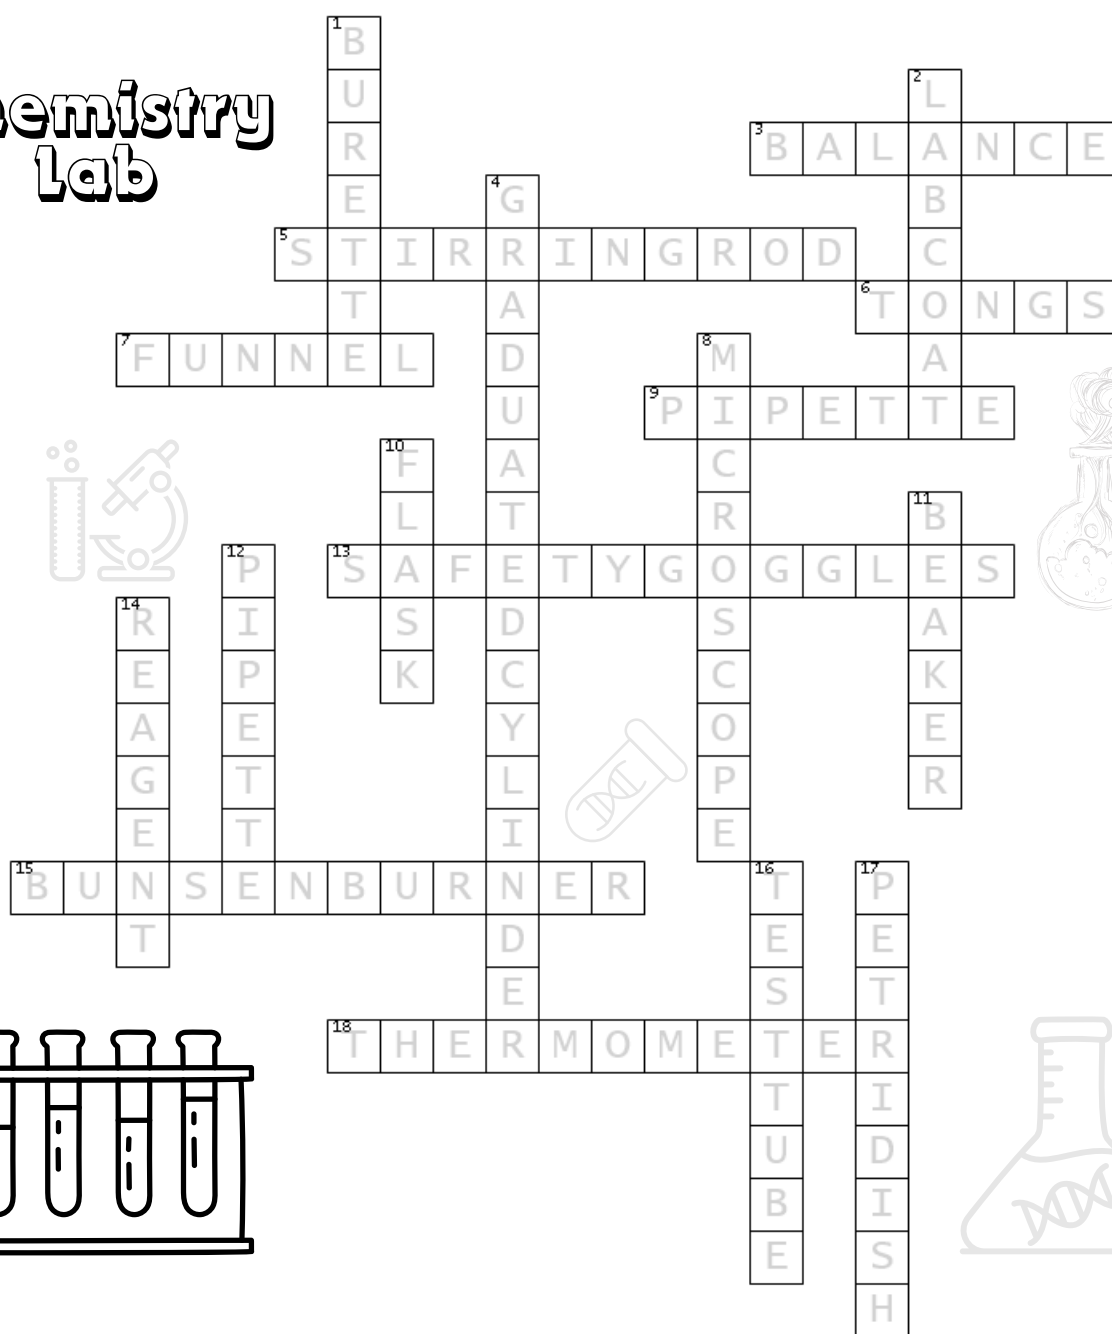

ACROSS

3. Scale used to measure mass of substances.
5. Glass rod used to stir solutions.
6. Tool used to handle hot or dangerous items.
7. Device used to pour liquids into a container with a small opening.
9. Device for accurately measuring liquids.
13. Protective eyewear worn to shield eyes from chemicals.
15. Gas burner used for heating substances.
18. Instrument used to measure temperature.

DOWN

1. Precision tool for dispensing measured amounts of liquid.
2. Protective garment worn in the lab.
4. Measuring instrument for precise liquid volumes.
8. Tool used to view small objects or organisms.
10. Laboratory container with a narrow neck.
11. Glass container used for mixing liquids.
12. Used for measuring and transferring small amounts of liquid.
14. Substance used to cause a chemical reaction.
16. Small glass tube used for holding and mixing
17. Shallow dish used for growing cultures
